

Module - 3 Case-Study

1. Manage the scaling requirements of the company by:

Deploying multiple compute resources on the cloud as soon as the load increases

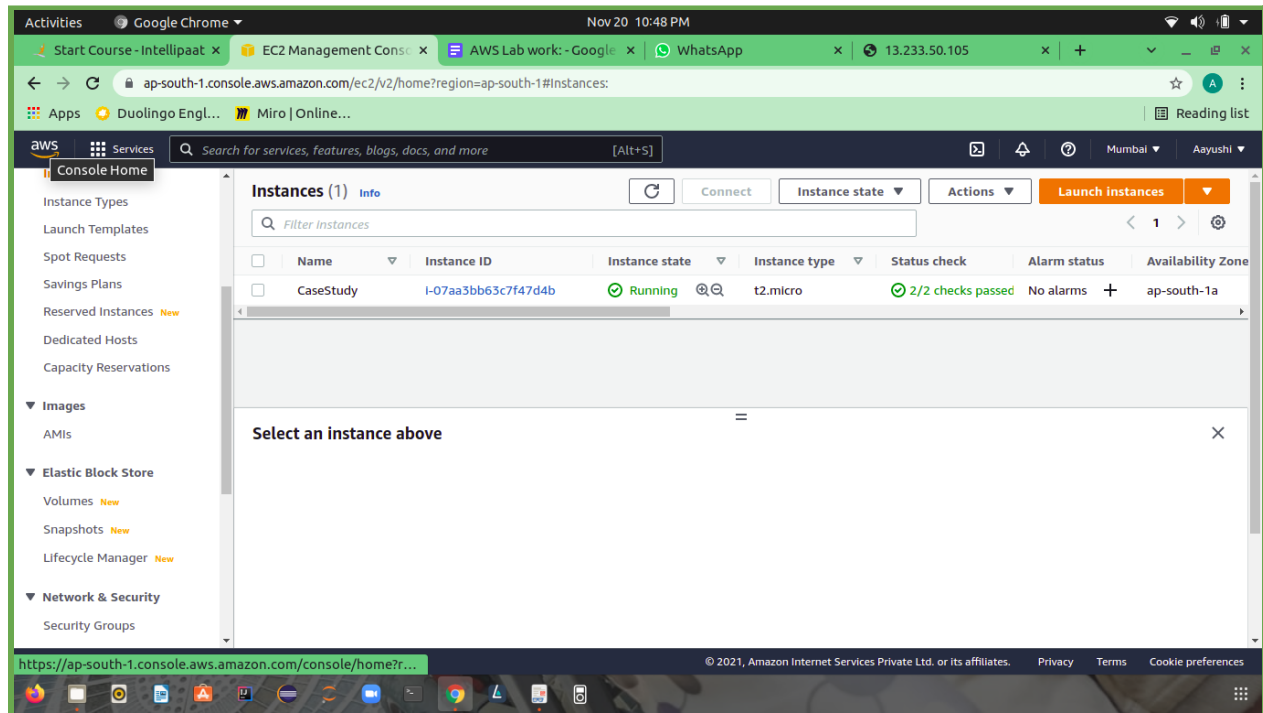

and the CPU utilization exceeds 80%

Removing the resources when the CPU utilization goes under 60%

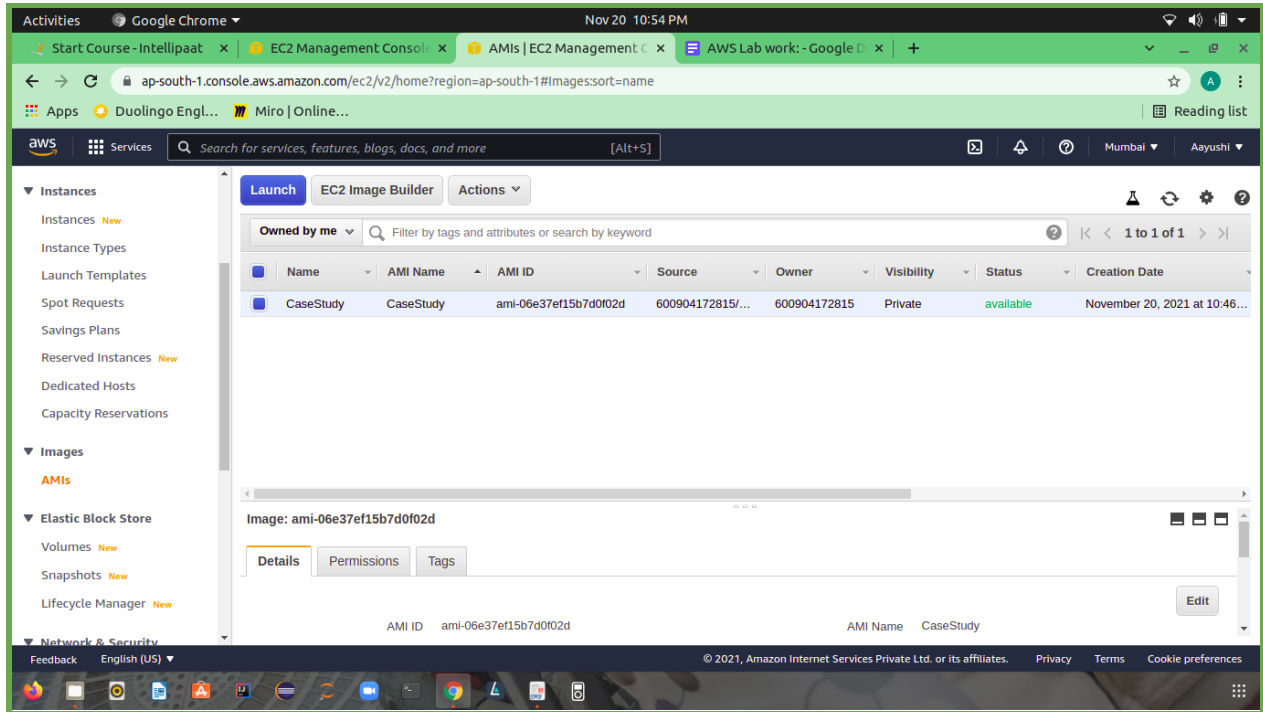

2. Create a Load balancer to distribute the load between compute resources

3. Route the traffic to the company's domain

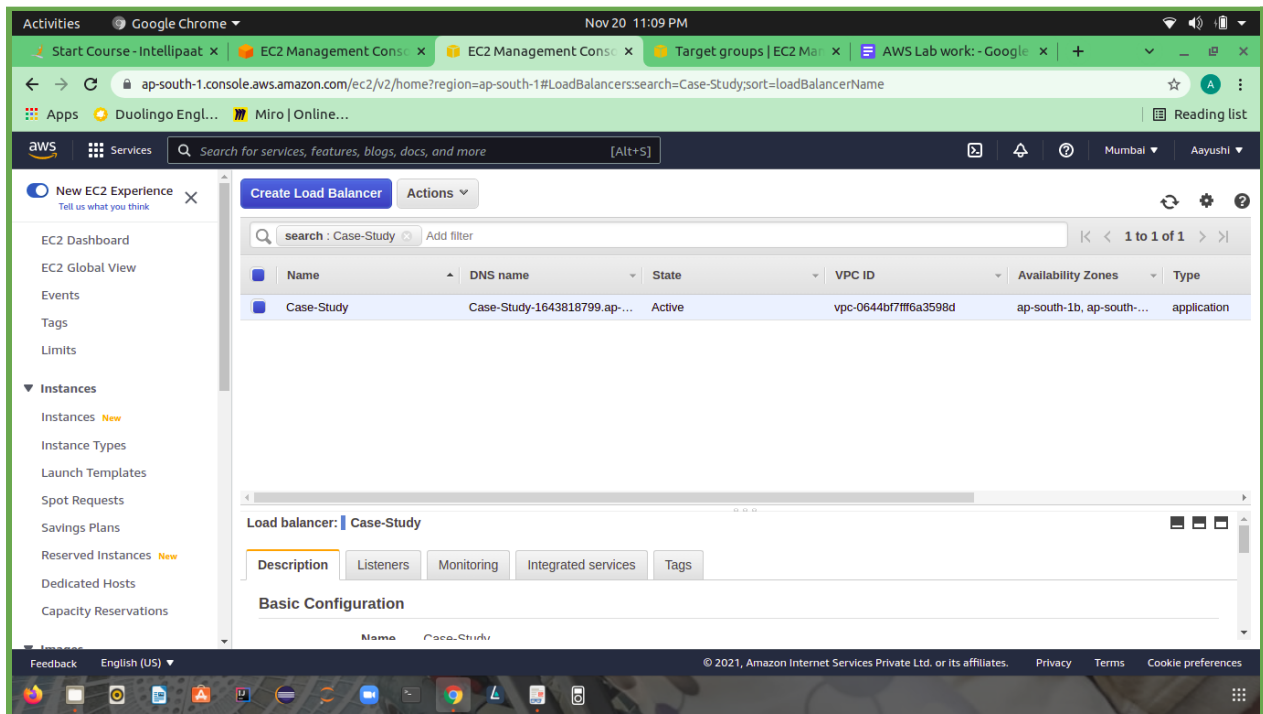

Create a instance by using bootstrapping code

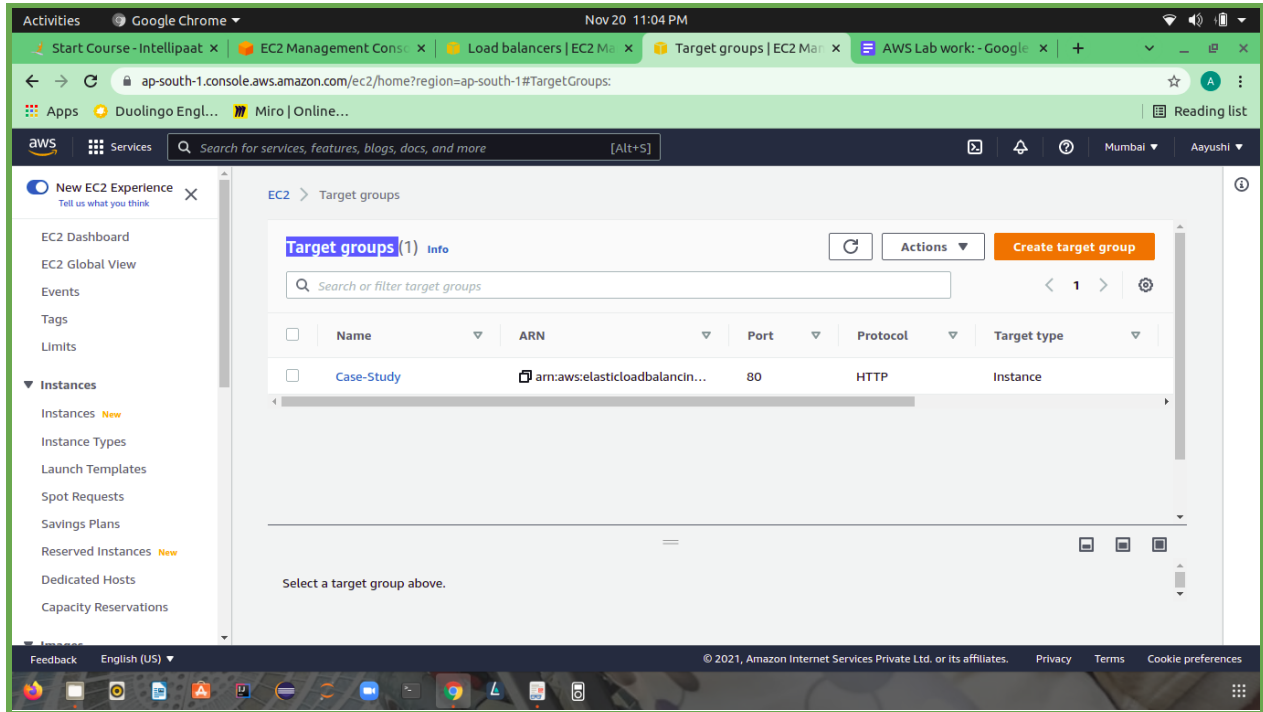

Create a AMI

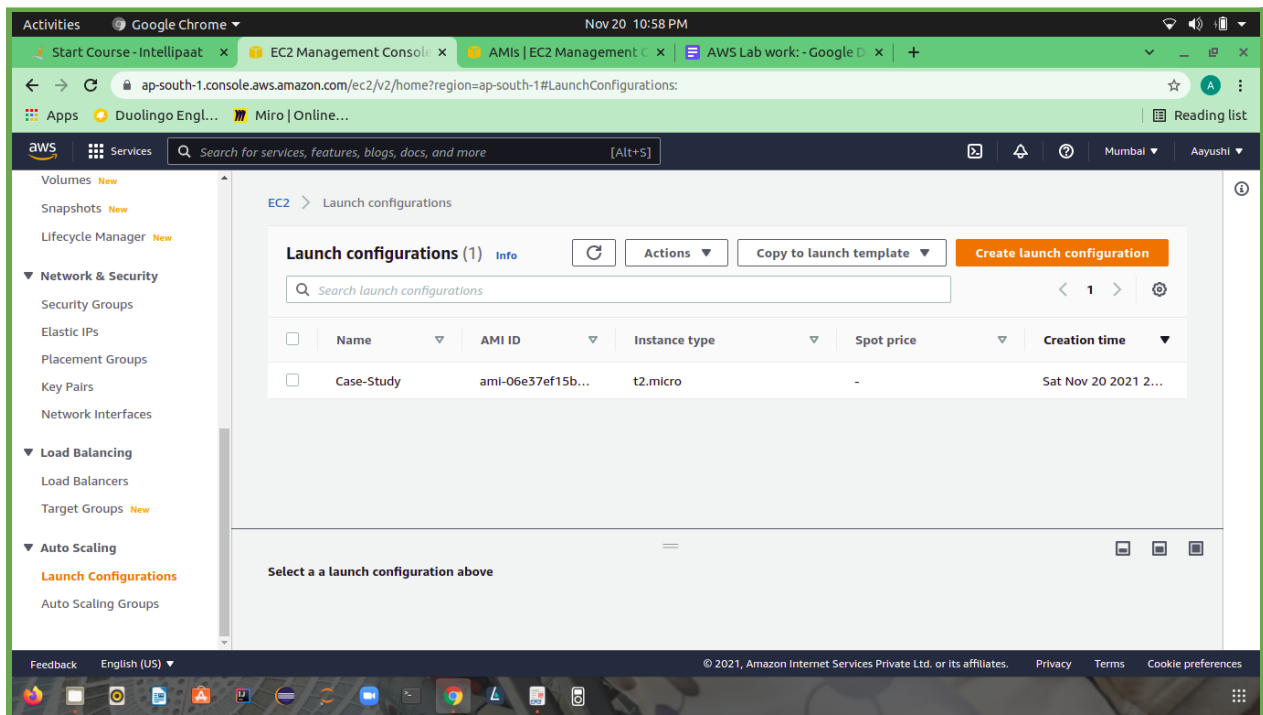

Create application load balancer and target group

Now launch configuration to create an auto scaling group

Now create auto scaling group

Step 4: Configure group size and scaling policies Edit

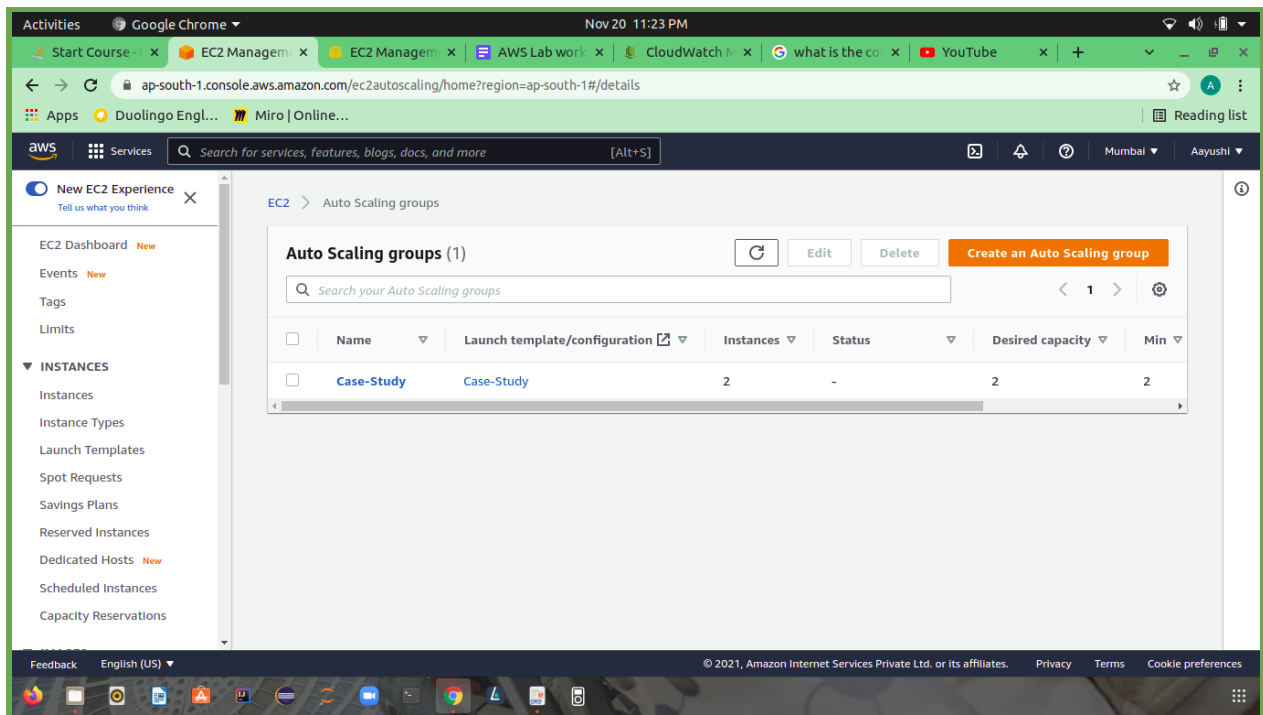

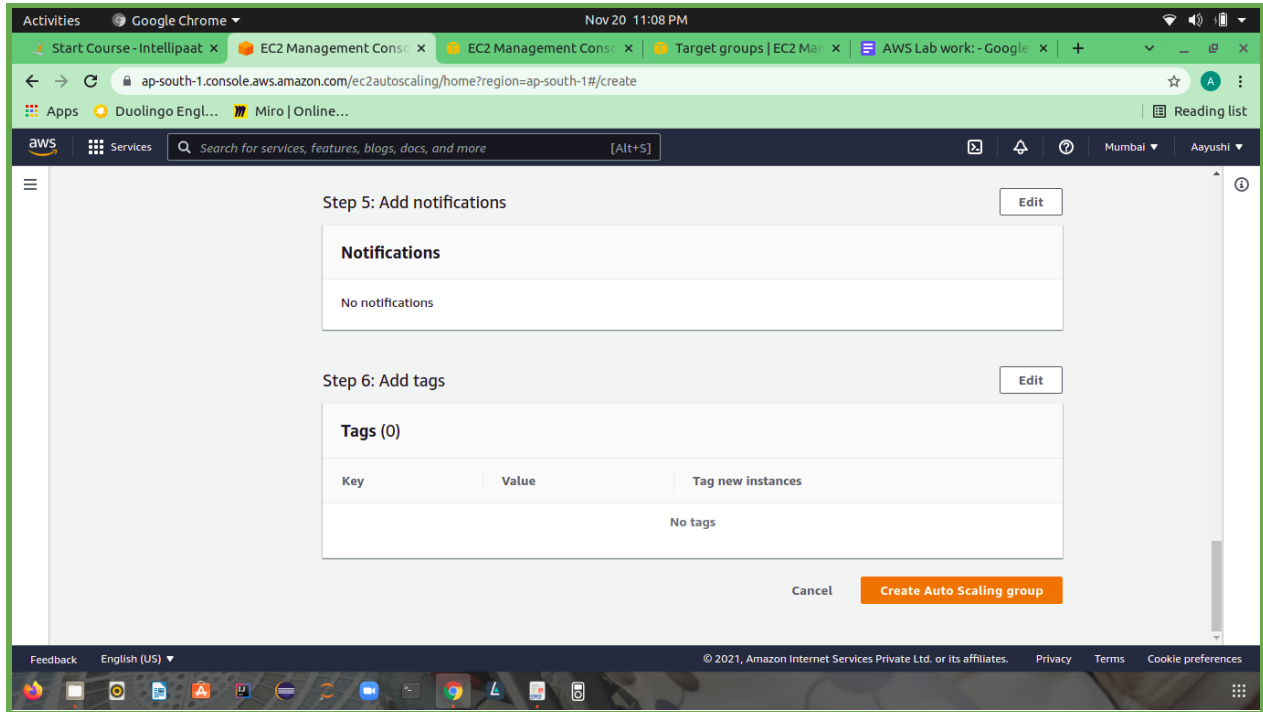

Group size

Desired capacity	Minimum capacity	Maximum capacity
2	2	4

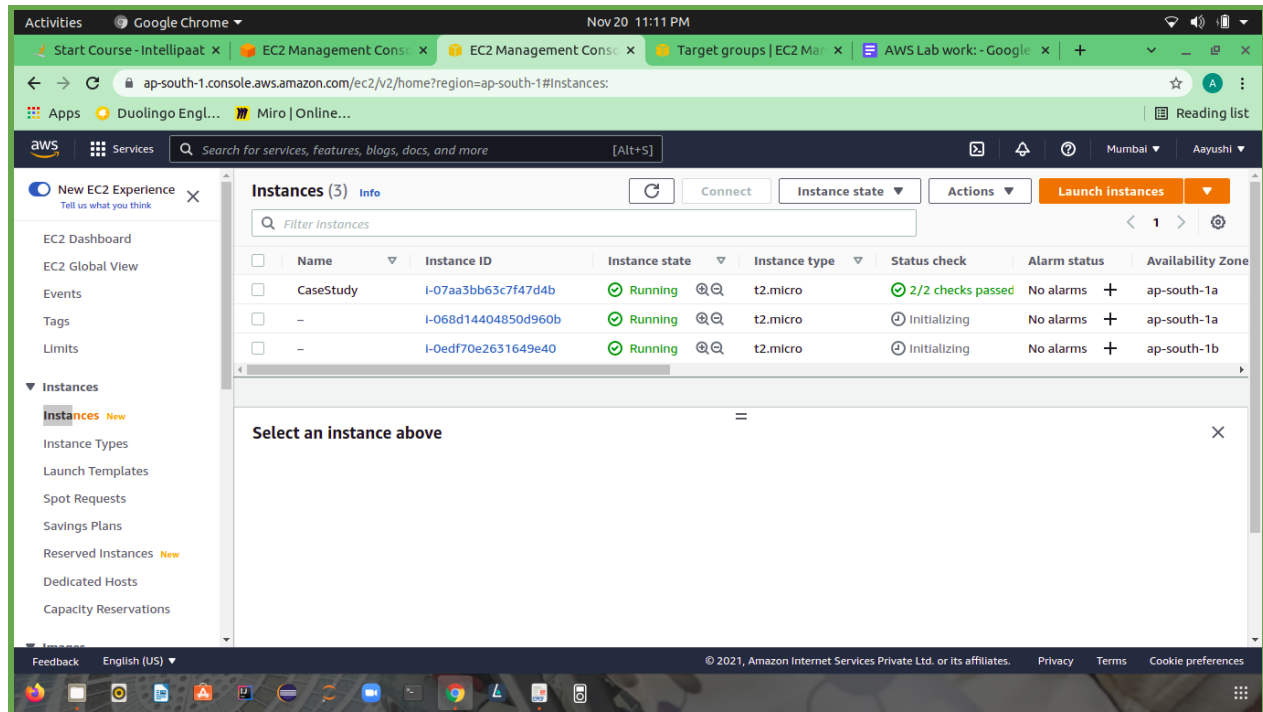

Scaling policy

Target tracking scaling	Scaling policy name	Execute policy when
Policy type	Target Tracking Policy	As required to maintain Average CPU utilization at 50
Take the action	Instances need	Scale in
Add or remove capacity units as required	100 seconds to warm up before including in metric	Enabled

Now check the status instance has been created automatically

Analysis the status of cpu utilization by using cloud watch
 Take remote to the instance and use below command and increase cpu utilization
 sha1sum /dev/zero &

Create cloud watch alarms

Activities Google Chrome Nov 20 11:56 PM

Start x EC2 M x Mana x I-068 x AWS x Cloud x what x YouT x Creat x Dyna x What x +

ap-south-1.console.aws.amazon.com/ec2/home?region=ap-south-1#ManageCloudWatchAlarms:instanceId=i-068d14404850d960b

Alarm thresholds

Specify the metric thresholds for the alarm.

Group samples by: Maximum Type of data to sample: CPU utilization

Alarm when: <= Percent: 60

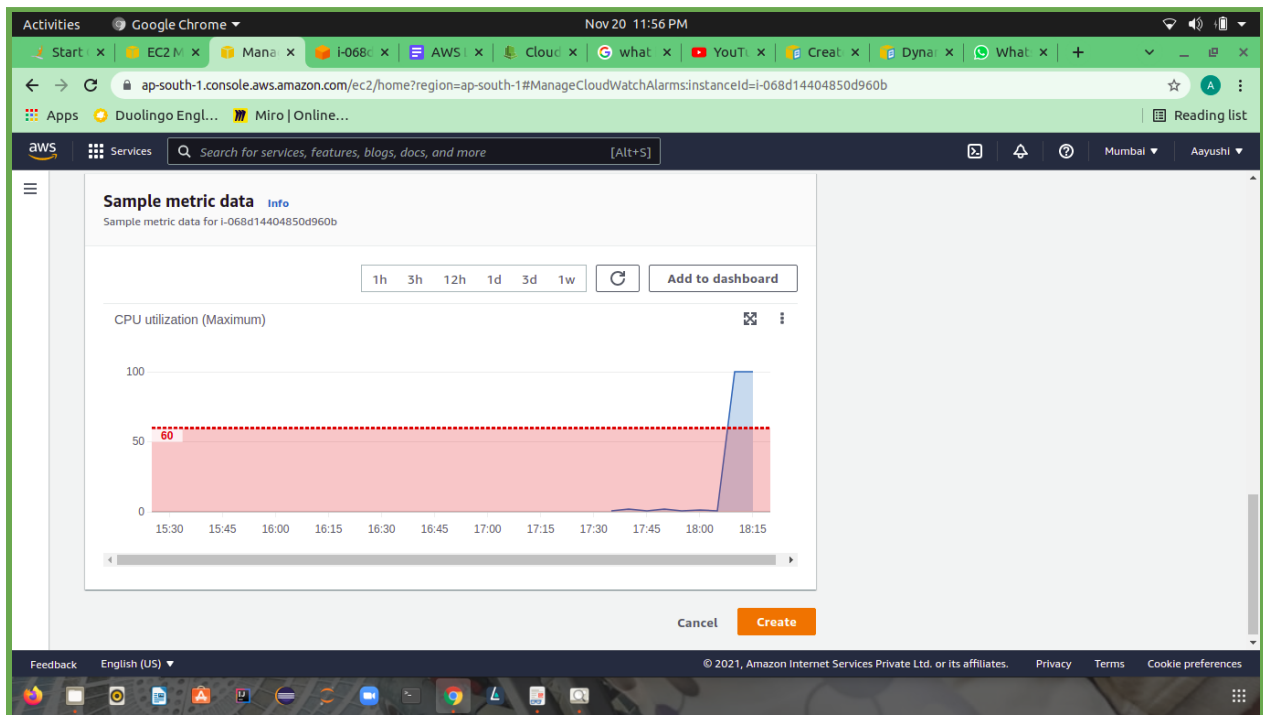

Consecutive period: 1 Period: 15 Minutes

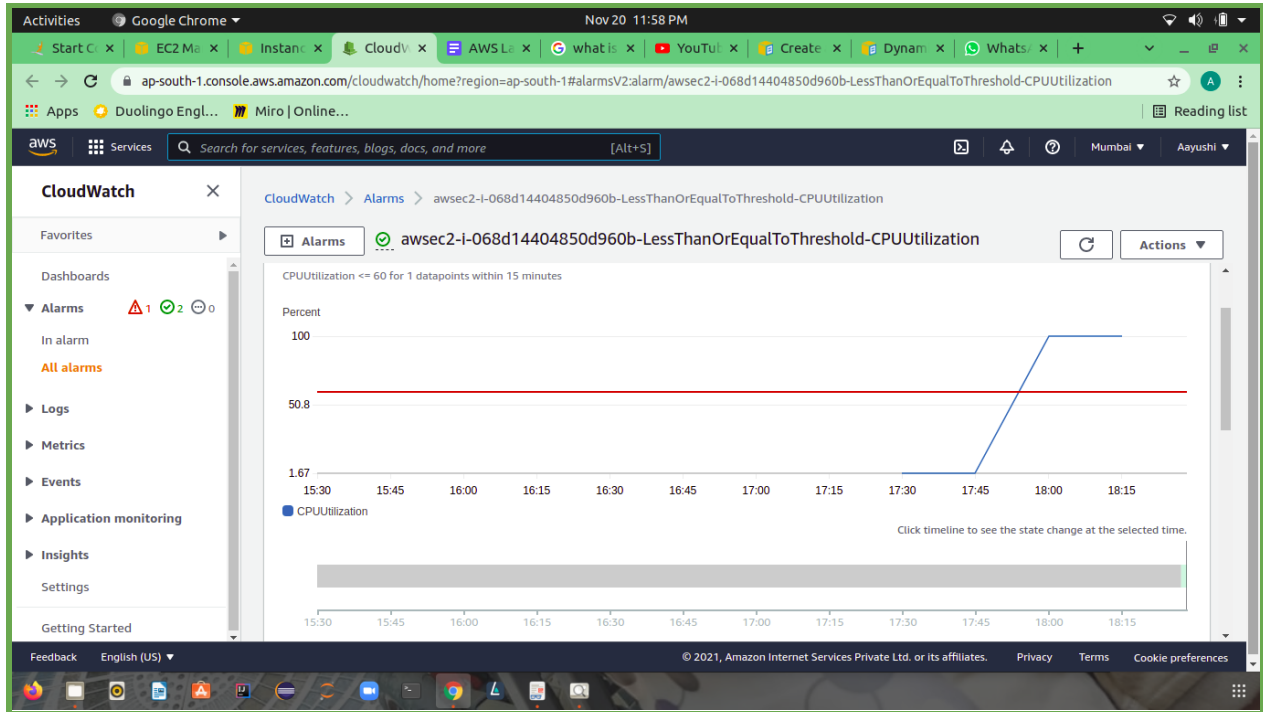

Alarm name: awsec2-i-068d14404850d960b-LessThanOrEqualToThreshold-CPUUtilization

Sample metric data

Sample metric data for i-068d14404850d960b

Feedback English (US) © 2021, Amazon Internet Services Private Ltd. or its affiliates. Privacy Terms Cookie preferences

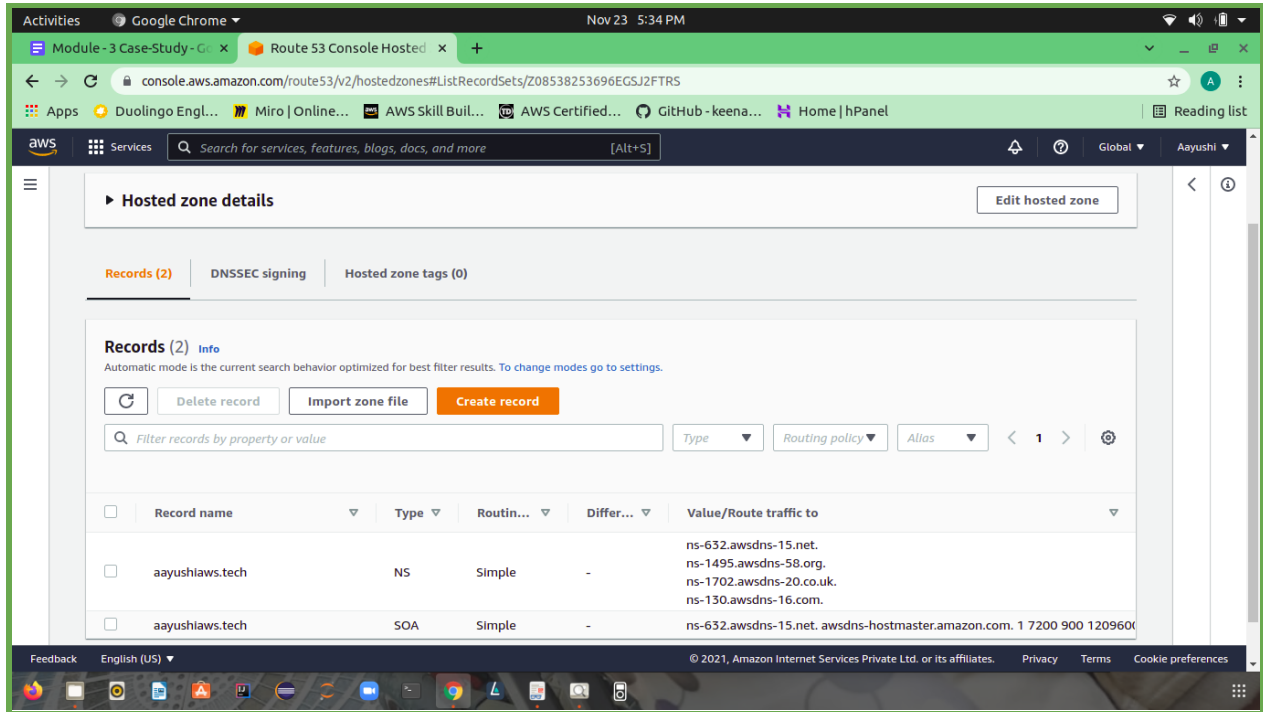

If cpu utilization below 60% you get a alarm then terminate instance automatically

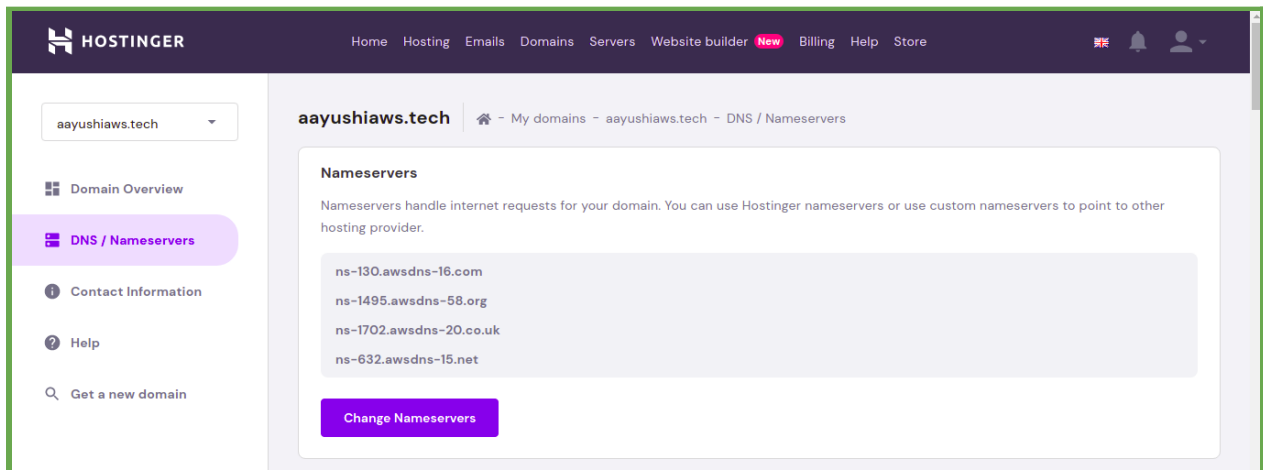

The screenshot shows the AWS Management Console 'Instances' page. The table below lists the instances:

	Name	Instance ID	Instance state	Instance type	Status check	Alarm status	Availability Zone
<input type="checkbox"/>	CaseStudy	i-07aa3bb63c7f47d4b	Terminated	t2.micro	-	No alarms	ap-south-1a
<input type="checkbox"/>	-	i-068d14404850d960b	Running	t2.micro	2/2 checks passed	1 alarms	ap-south-1a
<input type="checkbox"/>	-	i-Oedf70e2631649e40	Running	t2.micro	2/2 checks passed	No alarms	ap-south-1b
<input type="checkbox"/>	-	i-Ob1dc0c82c4a057c4	Running	t2.micro	2/2 checks passed	No alarms	ap-south-1b

Now create route 53 to route the traffic by using domain aayushiaws.tech

Connect to the DNS

Create new record using alias
